

Bridge and Storm Culverts Projects

There are 110 bridge and storm culvert crossings citywide. These crossings support the roadway above and some have been constructed in the early 1900's. The City's goal is to assess all the bridges and culverts and create an evaluation report to program the rehabilitation of the failed structures.

Some of the projects that are in design are:

- Citywide Condition assessment
- Summit Drive Culvert Rehabilitation

Future Projects:

- Easton Creek Bridge Repair
