

Sanchez Creek Watershed Projects

The Sanchez Creek Watershed (Including Terrace Creek and Laguna Area) drains the central Hillsborough area bounded by Sanchez Avenue on the north and Ralston Avenue on the south. The drainage is carried by Sanchez Creek through open channels and box culverts to the Caltrain Railroad tracks. Stormwater from the Laguna Avenue residential area is collected and carried by the Terrace Creek box culvert to the same area. The combined stormwater is carried through a double box culvert from Carolan Avenue to the Burlingame Lagoon.

Projects

- Terrace Creek Improvements (completed 2015)
- Laguna Pump Station and Debris Basin (project rescope and completed 2015)
